# We have Big Game Conflicts with Agriculture

Mainly deer,  
elk and bear

# Livestock, Fence and crop Damage

People are growing crops  
within wildlife habitat in areas  
like Crystal, Tsaile, Wheatfields,  
Lukachukai, Cove

If you are farming within  
wildlife habitat you need to  
invest in a fence

We have wildlife friendly fence specifications we provide to farmers

Improper fencing is deadly to  
many wildlife species

We will meet owner on site to  
evaluate the damage

# We identify the species causing the damage

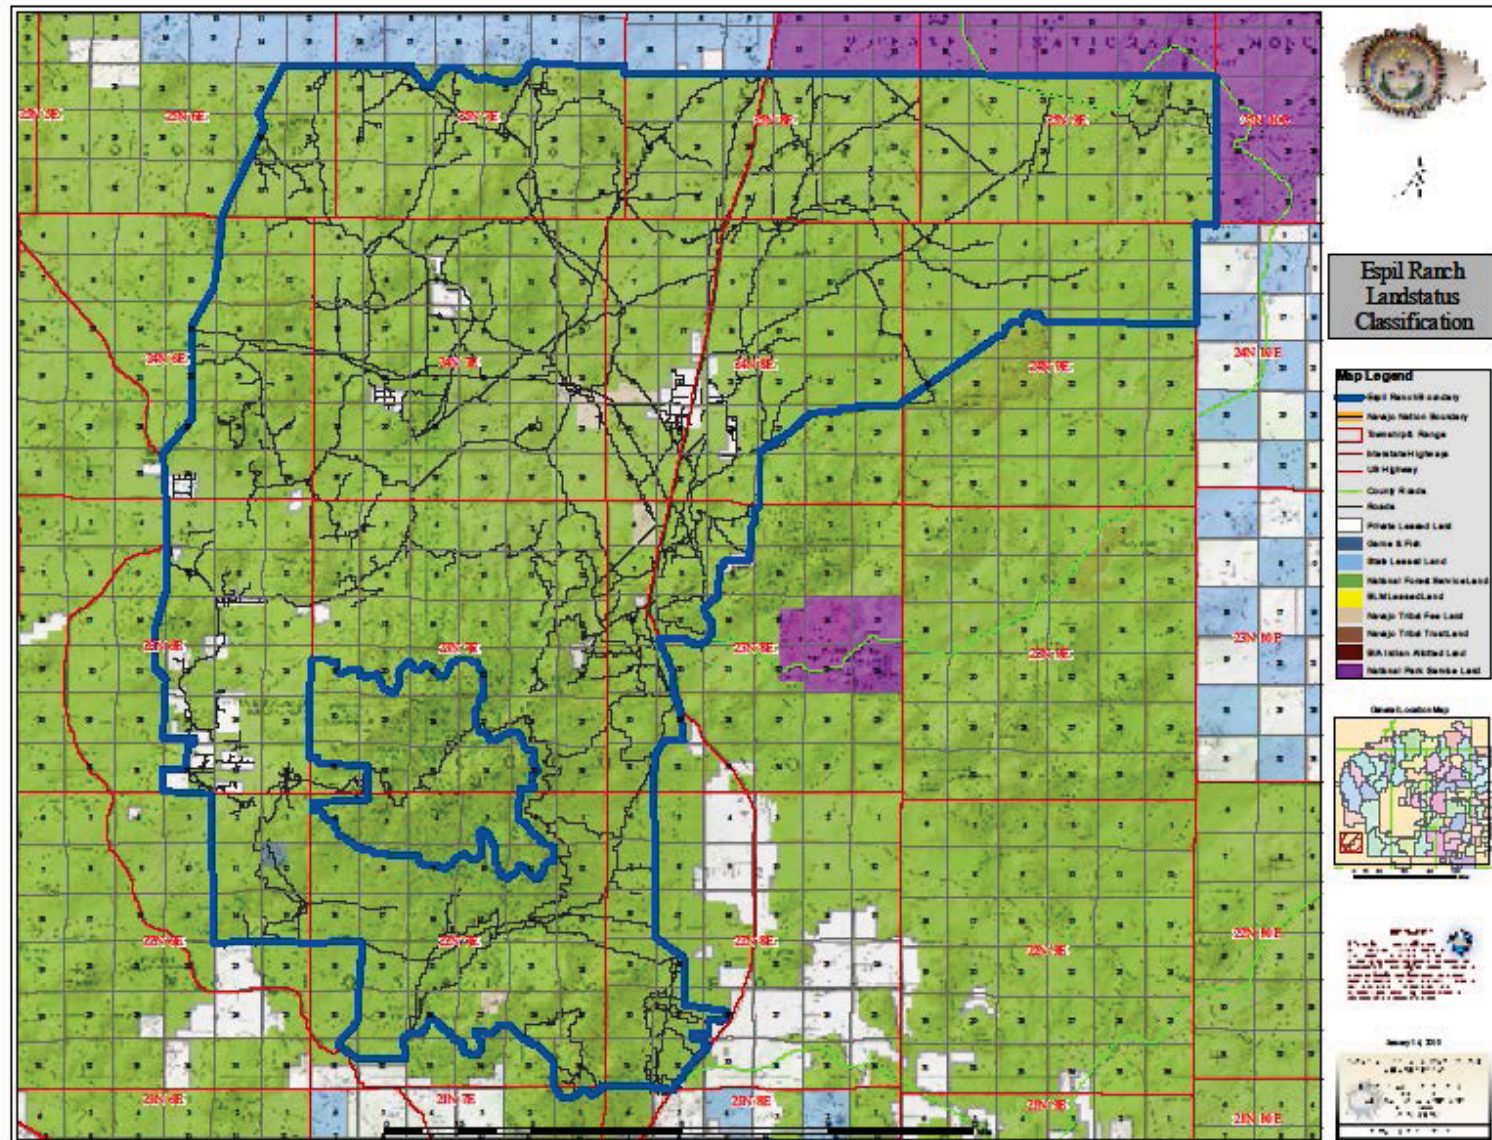

10:52PM 11/07/2013 0199

We verify the extent of the damage

We assess the value of the  
property damage

We discuss potential solutions to the problem with the permittee

When there is significant damage  
to crops caused by deer or elk

We offer the farmer fencing  
materials that they are responsible  
for installing

We will provide barbed wire  
and we get a pole permits  
from Forestry to provide longer  
fence posts to exclude the deer  
and elk

We have also provided T-Posts that have been welded to existing T-Posts to raise the level of a fence

We do not provide special permits to harvest deer or elk causing property damage because it is not a long-term solution to the problem

We do not provide financial  
assistance to farmers

Some of the complaints are not validated

If crops are of no value due to drought conditions, we do not invest in that situation

It is illegal to kill big game without  
a permit

Except for predators such as bears and lions when they are in the act of attacking livestock

Beavers have caused problems  
with irrigation and dam repair  
projects

We will remove beavers in such  
instances upon request

Most beaver problems are  
along the San Juan River  
Irrigation areas

Individuals can harvest beavers  
with a trapping permit or a  
Small Game Permit
